

## *A/V Solution Set - Basic System*

**P/N AVSS1BSYS1000.1 "Now available on our GSA Schedule"**

### **A/V Solution Set - Basic System**

The "Basic System" audio/video solution is built around a switcher, which can be adapted to many popular audio/video sources and output devices and has a built-in infrared control system for selecting sources to be played. The "Basic System" comes with one VCR (set up for playback only) and one document camera as sources and two ceiling mounted speakers. The "Basic System" may be expanded to connect additional sources – up to two more component video devices (like a computer) or up to two more composite or S-video devices (like a television tuner) – for a total of five. The "Basic System" is packaged in a 28-inch equipment rack that combines furniture elegance with a robust rolling steel enclosure that incorporates an attractive graphite finished top and comes with one interface plate for clean connections to field wiring.

The display devices are not included and can be purchased separately from SIGCOM Display Solutions that include traditional CRT monitors, plasma displays and projection system.

Price includes engineering, onsite installation and training, and travel.
