

Optical Attachment System - 2 eyepieces (binocular) + illuminators

P/N SIGC-TPB-2-I

Optical Attachment System - 2 eyepieces (binocular) + illuminators

This optical attachment system is an adapter that will capture, transmit and enhance existing optics, including night vision, binoculars, and riflescopes. The adapter can provide active illumination in either the visible or IR spectrum and/or video capture capability of B&W, color or low illuminations specialty cameras. The adapter does not obscure the operator's view. These adapters are low cost, portable, very light weight and easily attached and removed from most existing optics. When the adapter is fitted with its own zoom capability, it gives the existing optic and video capture camera an exponential zoom capability. An optic zoom power of 15x coupled with the adapter zoom of 10x results in a zoom capability of 150x at a fraction of the 150x optic price. This adapter is for two-eyepiece optics and includes illuminators.
