

Ultra Compact DVR System Field Analysis System

P/N SIGC-TPRAS-10

Ultra Compact DVR System Field Analysis System

The ultra compact digital video recorder system provides broadcast quality video and audio recording and playback. This unit provides the field analysis systems for the DVR system. The single circuit board design video recorder/player is designed for standalone and portable operation. The system is capable of recording up to 50 hours of video data, and recording media can be either hard drive or Flash disk. The field analysis stations are based on an IBM laptop computer and includes a separate rechargeable battery providing 12+ hours of continuous operation. The laptop, battery and connection electronics are housed in a Pelican 1490 case. The SIGC-TPR-5 black box recorder unit docks in this case and the software application provides operator control of the system in the same manner as standard Sony professional video equipment: noiseless frame-by-frame operation, backward/forward viewing and jog/shuttle control.
