

## *TPS Software – Any two modules*

### **P/N SIGC-TPS-2**

#### **TPS Software - Any two modules**

Temporal Processing System software provides daytime and nighttime real-time video enhancement; multiple axis stabilization contains extensive networking and security features and works with all video input types. TPS penetrates fog, haze and mirage artifacts; it suppresses image jitter introduced by camera vibration and produces excellent imagery at distances up to 50km when integrated with long-range optics. The operator has full control over the process and can enhance night vision clarity, color and can reduce noise substantially. Any two modules for a single sensor.
