

TPS Software - Super Stabilization & Resolution Enhancement

P/N SIGC-TPS-SS/RE

TPS Software - Super Stabilization & Resolution Enhancement

Temporal Processing System software provides daytime and nighttime real-time video enhancement; multiple axis stabilization contains extensive networking and security features and works with all video input types. TPS penetrates fog, haze and mirage artifacts; it suppresses image jitter introduced by camera vibration and produces excellent imagery at distances up to 50km when integrated with long-range optics. The operator has full control over the process and can enhance night vision clarity, color and can reduce noise substantially. This software provides super stabilization and resolution enhancement for a single sensor and includes illuminators.
